ENVIRONMENTAL POLICY

Tirana International Airport (TIA) recognizes the importance of maintaining and enhancing the quality of the environment in the Republic of Albania. TIA is fully committed to controlling and minimizing the potential impact on the environment and on the local communities due to operation and development of Tirana International Airport, as well as to assuring the environmental standards in all areas of its concern.

The guideline of our actions is the integration of sustainability principles into our business processes and decision making, by adopting measures to conserve natural resources and energy, and to protect the ecosystems in order to maximize the social, economic and environmental benefits from continued growth of airport.

We will plan, review and update our environmental objectives and targets in order not only to comply with the national legislation and regulations but also to improve our environmental performance through continuous monitoring of environmental conditions, undertaking initiatives to effectively and responsibly manage environmental challenges by pursuing a proactive approach for the future.

TIA will promote awareness and will encourage the use of environmentally responsible practices among TIA employees. With our experience in environmental management we will encourage and support our business partners, community to participate in an airport wide cooperation.

TIA has set up and is implementing and maintaining an Environmental Management System (EMS) oriented toward ISO 14001:2015 and ensures that EMS functions is efficiently integrated with other Management Systems within the Company and is continuously improved during our activities.

Environmental performance and achievements will be published and promoted through company publication
